

Introduction to Computer Networks

1. The OSI Model has 7 layers: Physical, Data Link, Network, Transport, Session, Presentation, Application
2. TCP (Transmission Control Protocol) is connection-oriented and ensures reliable data transfer.
3. UDP (User Datagram Protocol) is connectionless and faster but does not guarantee delivery.
4. IP addresses identify devices on a network; IPv4 uses 32-bit addresses while IPv6 uses 128-bit addresses
5. DNS (Domain Name System) translates human-readable domain names to IP addresses.
